Z. Naturforsch. **2011**, *66b*, 961 – 964; received April 30, 2011

Two new phenylisobenzofuranone nodulisporones A (**1**) and B (**2**) were isolated from the fungicolous *Nodulisporium* sp. Their structures were determined by spectroscopic methods. Compound **1** exhibited antimicrobial activity against *Candida albicans* and *Trichoderma harzianum*.

Key words: Phenylisobenzofuranone, Nodulisporones A and B, Fungicolous Fungus,
Nodulisporium sp. SH-1, Antimicrobial Activity
